

June 2010

We in the USA and internationally call on European legislators to restrict all Brominated Flame Retardants (BFRs) and Polyvinyl Chloride plastic (PVC) in the June 2nd vote on the revisions to the RoHS Directive.

We urge you to ensure a strong revised Directive on the Restriction of Hazardous Substances (RoHS) that reflects the decades of sound science documenting the inherent hazards of brominated organic substances and Polyvinyl Chloride (PVC). These materials will generate some of the most toxic compounds in existence: dioxins and furans. Dioxins are a priority pollutant under the Stockholm Convention for Persistent Organic Pollutants (POPs).

The revised RoHS Directive must also support the growing movement by companies within the global electronics sector to eliminate the use of all BFRs and PVC. Safer Substitutes exist. Please vote for safer products and safer waste recycling of e-waste.
